

When it comes to **green** business, FCCI is committed.

At FCCI, being a good steward of our environment is more than a hope, it is a responsibility. We are dedicated to the proper management of our resources today, and tomorrow.

Through facility management green practices, here are some of the ways that we protect the environment each and every day:

AUTOMATION

FCCI Insurance Group **reduces its paper usage** by scanning mail, document sharing, managing workflows electronically and using published email distribution lists to automatically import information into our imaging systems. Policyholders view and pay bills online more than ever, and agents can choose electronic delivery.

FACILITIES

Our demand flow control system and ventilation system at the home office have **reduced HVAC energy consumption by 20-30%** and continue to provide substantial energy savings. Our lighting loads have been largely converted to LED, which is longer-lasting and more efficient. We use chemical air filtration, motion sensors for lighting and sinks, and reclaimed water for irrigation. We review our electricity usage with our power and electricity vendor biannually to analyze and streamline our consumption.

INFRASTRUCTURE

FCCI uses server consolidation, network storage and virtualization to maximize our data center efficiency. Ongoing benefits include **lower energy costs** and more reliable business continuity for our customers. Whenever possible, teammates also use digital file storage instead of paper files, reducing the need for physical file storage and maintenance.

RECYCLED EQUIPMENT

By contracting vendors that recycle and reuse technology equipment, FCCI has been able to **reduce the amount of new technology purchased**. This practice eliminates the equivalent of 167 cars from the road through greenhouse gas reduction, energy to power 1,359 homes and 2,193 pounds (1 ton) of hazardous waste to our landfills.

ONLINE MEETING RESOURCES

Online meeting resources and video conferencing help us **reduce our carbon footprint** by averting emissions caused by domestic travel. Flexible scheduling, telecommuting and optional compressed work weeks also help teammates conserve energy and resources.

RECYCLING

Paper waste is processed through our shredding and recycling service. FCCI is proactive in recycling **all plastic, aluminum and glass**.

VENDORS

FCCI partners with vendors who use sustainable products and energy efficient processes that contribute to **LEED certification** and a healthy work environment.

More than a policy. A promise.
